r28.0.1 Changelog

```
+----------------------------------+
|   r28.0.1 Release - 195062    |
+----------------------------------+
```

Release day: August 21st 2024

Fixes

- DSOF-20204 - Fixed an issue where VFC Firmware and Generation would not be visible for remote machines in the feed view
- DSOF-27491 - Fixed an issue where the CameraControl layer did not send strings on playback
- DSOF-27593 - Fixed an issue where the CameraControl layer could not send a Preset above 15
- DSOF-27720 - Fixed an issue where BlackTrax with RTTrPM device did not snap points to tracked points correctly
- DSOF-27767 - Fixed an Access Violation when using RigidBody tracking workflow
- DSOF-27864 - Fixed an issue where adding a DMX screen with labels rendered to the stage would cause parallel and cylindrical mapping to no longer render their outlines
- DSOF-28004 Fixed an Access Violation when viewing the Machine properties for any unconfigured/newly created Machine
- DSOF-28025 - Fixed an issue where running an xR or VP project that was using an NDI source caused the input to stutter once a RenderStream layer is started
- DSOF-28039 - Fixed an issue where max() and min() expressions had the same behaviour
- DSOF-28069 - Fixed an issue where Nginx couldn't start after installation if d3 nginx log folder is missing
