

## r30.1.1 Changelog

```
+-----+  
| r30.1.1 Release - 203629 |  
+-----+
```

Release day: December 4th 2024

### Improvement

- **DSOF-27786** - Manager will now display whether or not you have a Realtime Connector License on EX range machines under “Help > d3 Licenses”.

### Fixes

- **DSOF-27372** - Loading an H.264 encoded file will now give you a helpful error message explaining that the codec is unsupported instead of an access violation.
- **DSOF-28364** - Designer will now correctly detect new files that are added to sub-folders within shortcuts in the objects folder.
- **DSOF-28768** - Designer will now correctly output the value of a layer parameter via custom OSC output expressions and will no longer report a “recursion limit” error. Examples of values that can now be sent include:
  - `module:video.brightness`
  - `module:video.speed`
  - `module:video.volume`
  - etc.
- **DSOF-28769** - Single-layer Notch blocks no longer fail to load if they do not expose a layer parameter.
